

with the data populated into index fields. This automatic data recognition accelerates document indexing and ensures greater accuracy.

It also automatically extracts index field data. Users can train the program to locate the key index information in a document and it remembers that location and extracts the data from future documents, reducing the time it takes to process documents and makes indexing easier.

Bar Code Capabilities

The enhanced bar code engine in Kofax Express can read most commonly used 1D and 2D bar codes, even those obscured with stamps, handwriting or coffee cup stains. Scanning in color improves accuracy further, allowing flawless decoding of bar codes at low resolutions (100 or 150 dpi). Kofax Express detects bar codes wherever they are placed on a page, even when they are skewed at angles.

Rubber Band Recognition

Kofax Express users can now easily index documents by selecting the text in the document with their mouse. Kofax Express automatically populates the index field with the information highlighted by the user, saving keystrokes and speeding documents indexing.

Watched Folder

Kofax Express automatically processes images (TIFF, BMP, JPEG and PDF) uploaded to a watched folder as if they were delivered from a scanner. This feature enables Kofax Express to process images from sources such as MFPs, faxes and saved images, providing a single interface to users' back end repository for all images from all sources.

Searchable PDF

The Searchable PDF feature includes live text with PDF images, enabling users to easily and accurately search for information in PDF documents.

Image Compression

Image compression captures crisp, clear color images while delivering the small file size of black and white images for quicker downstream processing and improved efficiency.

Background Export

Background Export complements Searchable PDF and image compression. By processing these file types in the background, the operator can continue to scan productively in the foreground. It is also useful for large standard PDF or TIFF exports.

Validation Scripts and Database Lookup

Using VB.NET, administrators can create validation scripts for enforcing business rules, looking up data from multiple database sources, or validating data entered into a field.

Point-and-Click Rescan

When a page is scanned with a folded corner, a forgotten sticky note affixed, or a double-feed that escaped detection, there is no choice but to rescan. In these instances, the "Point-and-Click Rescan" option improves the process by inserting the rescanned document in the correct place without rescanning the entire batch.

Flexible Document Separation

Kofax Express can separate groups of documents automatically, eliminating the need to scan documents one at a time. Just fill the auto document feeder to its capacity and Kofax Express divides the batch into individual document groups automatically based on patch codes, bar codes or inserted blank pages. Kofax Express process documents faster than ever before by keeping the scanner in continuous operation while it handles the separation.

Post-Scan Processing with VRS Corrections

If Kofax Express encounters a poor quality document it can't convert into a legible image, it doesn't shut down the scanner and wait for a fix. Instead, its VRS Corrections feature reserves the image for later inspection and correction by the operator without needing to rescan the document. Kofax Express retains enough information from the original that the operator can manually correct the image after completion, enabling the scanner to run without pause.

Visual Undo History

Everyone relies on the Undo button. But undo enough steps and it's easy to lose track of where you've come from, what was undone and what can be redone safely. Kofax Express includes a Visual Undo History feature that shows the sequence of processes that were done – or undone – on any document image.

About Kofax

Kofax® plc (LSE: KFX) is a leading provider of innovative smart capture and process automation software and solutions for the business critical First Mile™ of customer interactions. These begin with an organization's systems of engagement, which generate real time, information intensive communications from customers, and provide an essential connection to their systems of record, which are typically large scale, rigid enterprise applications and repositories not easily adapted to more contemporary technology. Success in the First Mile can dramatically improve an organization's customer experience and greatly reduce operating costs, thus driving increased competitiveness, growth and profitability. Kofax software and solutions provide a rapid return on investment to more than 20,000 customers in financial services, insurance, government, healthcare, business process outsourcing and other markets. Kofax delivers these through its own sales and service organization, and a global network of more than 800 authorized partners in more than 75 countries throughout the Americas, EMEA and Asia Pacific.
