## 7700 and 8800 Series
VIRTUAL SCANSTATION FOR FICHE AND FILM

MAXIMUM PRODUCTIVITY. MINIMUM EFFORT.

Complete QA. Minimum Effort.

By separating the capture function from the quality assurance (QA) routine, Virtual Scanstation optimizes the creation of digital images from microform. Flexible enough to integrate with existing workflows, Virtual Scanstation provides a powerful toolkit that allows every image scanned from microform to be checked and adjusted before creating the final saved image and without impacting the capture throughput. This scalable solution enables the speed of the scanner to be maximized at all times, while the throughput of the QA process is adjusted quickly and easily according to demand.

The easier, simpler, better way to scan

Ever been asked to improve an image from a microfiche or roll of film that has already been scanned? Ever had to check that every image has been saved correctly from the original source? Ever wanted to improve the productivity of your rollfilm or microfiche scanner?

Designed exclusively for use with the Wicks and Wilson range of production microfilm and microfiche scanners, Virtual Scanstation is an offline QA software tool that enables you to do the above and more.

WWL Production Microfilm or Microfiche Scanner

Microform Archive
Original microform data source

Capture
Uninterrupted capture and digitization of microform image data

Store
Complete image of microform stored in a digital archive ready for further processing and frame extraction

Digital Microform Archive

QA
All QA tasks (frame placement, addition of missed frames, image quality, file settings) carried out on data stored in and retrieved from Digital Microform Archive. Multiple QA workstations may be added to increase throughput.

Virtual Scanstation

QA Station 1 | QA Station 2 | QA Station 3 | QA Station 4

Output
Final image output from QA workflow available for subsequent processing: OCR, indexing, forms processing, etc.

Digital file output
(TIFF, JPEG, JPEG 2000, BMP, PDF, and others)

Rev 03/13

The flexibility of the system means that Virtual Scanstation can also be used to facilitate re-scans of images identified by other processes as requiring additional steps without having to access the original source.
